EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 4th April 1925.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st March 1925.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 4th April 1925. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE FIRST QUARTER OF 1925.

ENGLAND AND WALES.

Births.

The Births registered in the *First Quarter* of 1925 numbered 175,646 and were 9,840 below the number recorded in the corresponding Quarter of 1924. The Illegitimate Births totalled 6,945, or 543 fewer than in the first Quarter of 1924.

Of these 175,646 Births 89,783 were males and 85,863 females, giving a proportion of 1,046 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,047.

The Births registered in the Quarter correspond to an annual rate of 18·4 per 1,000 of the estimated mid-year population for the year 1924. This rate is 0·8 per 1,000 below that recorded in the corresponding quarter of 1924, and was the lowest birth-rate recorded in any first quarter except during the years 1918 and 1919.

Deaths.

The Deaths registered numbered 138,338 and were 29,678 more than in the preceding Quarter, but 21,941 less than in the corresponding Quarter of 1924. They included 69,468 males and 68,870 females, corresponding to an annual rate of 14·5 per 1,000 of the estimated population and a proportion of 1,009 males to 1,000 females. The general death-rate was 2·1 per 1,000 below that recorded during the first Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 7,469 cases, or 5·4 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 88 per 1,000, this being 14 per 1,000 below the rate for the first quarter of 1924, and 21 per 1,000 below the average of the 10 preceding first Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·09 in Rochdale, 0·12 in Tynemouth and 0·13 in Exeter; from *measles* 1·19 in Stockton-on-Tees, 1·35 in Middlesbrough, 1·42 in Cardiff and 1·67 in Burnley; from *scarlet fever* 0·15 in Liverpool and in Warrington and 0·16 in Stoke-on-Trent and in South Shields; from *whooping cough* 0·71 in West Ham and in Salford, 0·73 in South Shields, 0·92 in Stockport and 0·93 in Darlington; from *diphtheria* 0·34 in Edmonton, 0·36 in Doncaster, 0·38 in Merthyr Tydfil and 0·83 in Walsall; from *influenza* 1·72 in Canterbury, 2·21 in Rochdale, 2·31 in Stockton-on-Tees and 2·41 in Eastbourne.

The highest death-rates per 1,000 Births from *diarrhæa and enteritis* among children under two years of age were 13·6 in Doncaster, 14·1 in Ilford, 15·3 in Carlisle and 20·8 in Salford.

Small Pox.

Four fatal cases of small pox belonging to Strood R.D., Chesterfield R.D., Kettering U.D., and Sleaford R.D. respectively were

registered during the quarter; the case in Strood R.D. was of an Indian seaman in the Port of London Hospital.

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 37,308, as against 42,046, 68,181 and 25,207 in the first Quarters of 1922, 1923 and 1924.

NOTES ON MARRIAGES.—Fourth Quarter, 1924.

The number of *persons* married in the *fourth* Quarter of 1924 in England and Wales was 156,136 a decrease of 23,440 over the number in the preceding Quarter, but 2,388 more than that in the corresponding Quarter of 1923. The number corresponds to an annual rate of 16·0 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.— Third Quarter, 1924.

In Great Britain and Ireland 236,469 births and 116,777 deaths were registered in the three months ended 30th September 1924. The natural increase in population was therefore 119,692. The number of persons married was 209,422.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

JANUARY.

During the first few days there was a continuance of the stormy weather which prevailed towards the end of December. About the 4th fairer, colder weather set in which lasted about a week. This was the brightest week of the month and daily durations of sunshine exceeding 7 hours were recorded at a number of stations, notably in the south-east of England. By the 13th mild weather with local rain and strong south-westerly winds had set in. Severe gales were experienced on the night of the 13th to 14th; many large trees were blown down in North Wales in the Menai Straits neighbourhood. Conditions subsequently became sunnier and drier, but after the 22nd the weather again became unsettled. There was much rain in south-west England on the 25th and 26th. Rainfall was in excess of the normal in the south and ground frosts occurred generally throughout the month.

FEBRUARY.

February was mild and very wet; the unsettled weather which had prevailed from January 22nd continued throughout the greater part of the month. Heavy rain fell on the 10th to 12th. Gales were recorded on several days, but on the whole the month was less windy than January. During the third week the weather became quieter, colder and somewhat fairer. Daily durations of from 8 to 9 hours' sunshine were experienced in many districts between the 18th and 22nd. On the 22nd to 24th maximum temperatures did not exceed 35°F. at a few places in the north. By the 24th the weather had become unsettled again. The largest total duration of sunshine for the month was experienced in parts of the extreme south-western coasts of England, and the smallest in the north-western and eastern parts. The month's rainfall exceeded twice the normal over the whole of Wales and parts of northern and southern England. Ground frosts were numerous throughout the month.

MARCH.

At the beginning of the month the weather was fair in the west; in the eastern districts cloudy conditions prevailed with high north-easterly winds and gales in the Channel on the 3rd and 4th. Milder weather then set in temporarily, following a backing of the wind towards the west, but on the 7th northerly winds were renewed. Between the 13th and 19th winds were mainly westerly; the weather was fair and temperature rose above 55°F. on several occasions. On the 19th there was a return of the northerly winds and cold and generally cloudy weather prevailed until the 30th. The rainfall for the month was below normal in all districts; over a large part of southern and western England and Wales it was less than half the normal. Sunshine was deficient.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1925. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

To be purchased directly from H. M. STATIONERY OFFICE at the following addresses:
Adastral House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;
York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;
or 120, George Street, Edinburgh;
or through any Bookseller.

1925

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 4th July 1925.

Table VI. shows, for the 158 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th June 1925.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 4th July 1925. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1925.

ENGLAND AND WALES.

Births.

The Births registered in the *Second Quarter* of 1925 numbered 186,974 and were 11,328 above the number recorded in the previous quarter but 183 below that in the corresponding Quarter of 1924.

The Illegitimate Births totalled 7,555, or 360 fewer than in the second Quarter of 1924.

Of these 186,974 Births 95,537 were males and 91,437 females, giving a proportion of 1,045 males to 1,000 females; the average proportion in the 10 preceding second Quarters was 1,047.

The Births registered in the Quarter correspond to an annual rate of 19·4 per 1,000 of the estimated mid-year population for the year 1924. This rate is equal to that recorded in the corresponding Quarter of 1924, which was the lowest birth-rate recorded in any second Quarter except during the war years 1917-1919.

Deaths.

The Deaths registered numbered 113,267 and were 25,071 fewer than in the preceding Quarter, and 909 fewer than in the corresponding Quarter of 1924. They included 58,548 males and 54,719 females, corresponding to an annual rate of 11·7 per 1,000 of the estimated population and a proportion of 1,070 males to 1,000 females. The general death-rate was 0·1 per 1,000 below that recorded during the second Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 2,662 cases, or 2·4 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 66 per 1,000, this being 3 per 1,000 below the rate for the second Quarter of 1924, 14 per 1,000 below the average of the 10 preceding second Quarters, and equal to that in the second Quarter of 1923 which was the lowest rate recorded in any second Quarter since the establishment of civil registration.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·18 in Tynemouth; from *measles* 1·15 in Gateshead, 1·54 in Bristol, 1·64 in Tynemouth and 1·99 in Sunderland; from *scarlet fever* 0·10 in West Bromwich, in Manchester and in Preston, 0·13 in Liverpool and 0·17 in Rochdale; from *whooping cough* 0·59 in Newcastle-on-Tyne, 0·67 in Walsall and 0·73 in Burton-on-Trent and in South Shields; from *diphtheria* 0·23 in Edmonton, 0·24 in Bristol, 0·25 in Smethwick and 0·45 in Enfield; from *influenza* 0·60 in Gloucester and in Lincoln, 0·66 in Hastings, 0·68 in Barnsley and 1·01 in Stockton-on-Tees.

The highest death-rates per 1,000 Births from *diarrhoea* and *enteritis* among children under two years of age were 13·4 in Stockton-on-Tees, 14·1 in Dudley, 14·4 in Leicester and 15·3 in Oldham.

Small Pox.

Four fatal cases of small pox belonging to the Metropolitan Borough of Bethnal Green, Chesterfield, M.B., Middlesborough, C.B., and Kettering, R.D., respectively, were registered during the quarter.

A supplementary table (VIII. *a*) showing the distribution of the cases of small pox notified during the Quarter is given on pp. 24-25.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 73,707, as against 80,222, 82,710 and 72,981 in the second Quarters of 1922, 1923 and 1924.

NOTES ON MARRIAGES.—First Quarter, 1925.

The number of *persons* married in the *first* Quarter of 1925 in England and Wales was 92,370 a decrease of 63,766 over the number in the preceding Quarter, and of 1,620 over that in the corresponding Quarter of 1924. The number corresponds to an annual rate of 9.7 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.—
Fourth Quarter, 1924.

In Great Britain and Ireland 217,292 births and 139,981 deaths were registered in the three months ended 31st December 1924. The natural increase in population was therefore 77,311. The number of persons married was 182,406.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.***APRIL.**

The weather of April was generally changeable and showery, with many sunny periods. The second and third weeks were the warmest, the highest temperature of the month occurring at most stations on the 8th or the 12th. Following a period of southerly winds a change to westerly winds occurred on the 13th with high winds and gales from the 15th to the 18th. The third week was the wettest. During the last week the weather continued generally unsettled while local thunderstorms were of frequent occurrence. There were however many bright periods. The least sunny conditions prevailed in the eastern district of the British Isles.

MAY.

The weather of May was, like April, for the most part, changeable and showery with bright periods. Thunderstorms and hail showers were of frequent occurrence and the rainfall was everywhere above normal. The last two weeks were the wettest. Strong to high winds were recorded on several days especially towards the end of the month. Sunshine was slightly in excess in eastern England, but was deficient in all other districts. Ground frosts occurred in most parts of the country. Rounton (Yorkshire) had as many as 11 ground frosts and at Greenwich nine were recorded.

JUNE.

The weather of June was remarkable for its exceptional scarcity of rainfall and for its abundant sunshine, new records for both these elements being established at many stations. In many districts in the south and southwest of England and in the south of Wales the month was rainless. Following showery weather during the first few days, fine weather was experienced generally throughout the month. In many places the temperature exceeded 80°F. especially from the 9th to the 12th, the second and third week being the warmest and the week ending June 27th the coldest. The highest temperature of the month, 88°F, occurred at Camden Square (London) on the 11th.

The northern and eastern districts of the British Isles were the least sunny.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1925. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Including one death from small-pox.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 3rd October 1925.

Table VI. shows, for the 158 Smaller Towns the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th September 1925.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 3rd October 1925. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 3rd October 1925.

Note.:—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1925.

ENGLAND AND WALES.

Births.

The Births registered in the *Third Quarter* of 1925 numbered 181,943 and were 5,031 less than in the preceding Quarter and 4,705 below the number recorded in the corresponding Quarter of 1924. The Illegitimate Births totalled 7,386, or 152 fewer than in the Third Quarter of 1924.

Of these 181,943 Births 93,214 were males and 88,729 females giving a proportion of 1,051 males to 1,000 females; the average proportion in the 10 preceding third Quarters was 1,049.

The Births registered in the Quarter correspond to an annual rate of 18·6 per 1,000 of the estimated mid-year population for the year 1924. This rate is 0·5 per 1000 below that recorded in the corresponding Quarter of 1924, and was the lowest birth-rate recorded in any third Quarter except during the years 1917-19.

Deaths.

The Deaths registered numbered 95,127 and were 18,140 less than in the preceding Quarter, but 4,972 more than in the corresponding Quarter of 1924. They included 49,333 males and 45,794 females, corresponding to an annual rate of 9·7 per 1,000 of the estimated population and a proportion of 1,077 males to 1,000 females. The general death-rate was 0·5 per 1,000 above that recorded during the third Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 582 cases, or 0·6 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 62 per 1,000, this being 9 per 1,000 above the rate for the third Quarter of 1924, but 10 per 1,000 below the average of the 10 preceding third Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·13 in Exeter; from *measles* 0·36 in West Bromwich, 0·72 in Warrington, 0·89 in Dudley, and 1·23 in Walsall; from *scarlet fever* 0·09 in Liverpool, and 0·10 in Bootle; from *whooping cough* 0·46 in Warrington, 0·50 in Gateshead, 0·62 in West Hartlepool, and 0·99 in Walsall; from *diphtheria* 0·19 in Bournemouth and in Chesterfield, 0·20 in Halifax, 0·27 in Luton, and 0·46 in Edmonton; from *influenza* 0·26 in Blackpool, 0·28 in Walsall and in Aberdare, and 0·34 in Canterbury.

The highest death-rates per 1,000 Births from *diarrhæa* and *enteritis* among children under two years of age were 46·2 in Leeds, 47·8 in Dudley, 48·7 in Walsall, and 61·1 in Sunderland. Special tables relating to summer mortality from *diarrhæa* and *enteritis* are inserted in this Return (Tables IX. and X.).

Small Pox.

One fatal case of small pox belonging to Newcastle-on-Tyne C.B. was registered during the quarter.

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on pp. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 86,816, as against 104,791, 98,812 and 96,493 in the third Quarters of 1922, 1923 and 1924.

NOTES ON MARRIAGES.—Second Quarter, 1925.

The number of *persons* married in the *second* Quarter of 1925 in England and Wales was 163,558 an increase of 71,188 over the number in the preceding Quarter, and 1,212 more than that in the corresponding Quarter of 1924. The number corresponds to an annual rate of 16·9 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.—

First Quarter, 1925.

In Great Britain and Ireland 223,119 births and 176,049 deaths were registered in the three months ended 31st March 1925. The natural increase in population was therefore 47,070. The number of persons married was 118,882.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.***JULY.**

The first three weeks of July were characterised by mainly fair, warm weather, the last week being marked by a cooler type of unsettled weather. The warmest periods of the month occurred between the 11th and 14th and between the 21st and 25th, the 22nd being the warmest day in most places. A maximum temperature of 92°F, the highest experienced since the beginning of the year was recorded at Hunstanton (Norfolk) on the 22nd, while at several stations in the eastern and midland counties of England the temperature reached 90°F on the same date. The rainfall during the first half of the month was well below normal but heavy falls, in many cases associated with thunderstorms, brought the monthly totals above normal in the southern districts. Thunderstorms occurred on various dates. Sunshine was slightly in excess in the northern districts and deficient elsewhere. Winds were light and variable.

AUGUST.

With the exception of a spell of fair to fine weather between the 14th and the 19th, the weather was mainly dull and unsettled. Temperature was above normal except in the south east of England where it was slightly deficient. The extreme screen temperatures for the month were 84°F at Sutton Bonington on the 17th and 35°F at Comondale on the 26th. Rainfall was patchy but on the whole was above normal in the southern and eastern districts. There were many places, however, where there was a decided deficiency. Sunshine was deficient and the prevailing winds westerly and generally light to moderate.

SEPTEMBER.

The weather of September was cold, windy and unsettled with, however, many bright periods. The mean temperature was below normal in all districts; from about the 4th to the 12th day temperatures remained, for the most part, below 60°F with occasional ground frost at night. A few days of fair to fine weather were experienced about the middle of the month and at the end of the month during which the highest day temperatures generally occurred. Rainfall was above the normal and at several stations in the midland counties and the west of England exceeded twice the normal. The prevailing winds were between west and north and although gales were infrequent high winds were of common occurrence. Sunshine was deficient.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1925. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Including one death from small-pox.

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 2nd January 1926.

Table VI. shows, for the 158 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st December 1925.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 2nd January 1926. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 2nd January 1926.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year. (See also page iv.)

NOTES ON THE FOURTH QUARTER OF 1925.

ENGLAND AND WALES.

Births.

The Births registered in the *Fourth* Quarter of 1925 numbered 166,416 and were 15,527 less than in the preceding Quarter and 4,511 below the number recorded in the corresponding Quarter of 1924. The Illegitimate Births totalled 6,464, or 329 fewer than in the Fourth Quarter of 1924.

Of these 166,416 Births 84,856 were males and 81,560 females, giving a proportion of 1,040 males to 1,000 females; the average proportion in the 10 preceding fourth Quarters was 1,051.

The Births registered in the Quarter correspond to an annual rate of 17·0 per 1,000 of the estimated mid-year population for the year 1925. This rate is 0·5 per 1000 below that recorded in the corresponding Quarter of 1924, and was the lowest birth-rate recorded in any fourth Quarter except that of 1917.

Deaths.

The Deaths registered numbered 126,274 and were 31,147 more than in the preceding Quarter, and 17,639 more than in the corresponding Quarter of 1924. They included 63,644 males and 62,630 females, corresponding to an annual rate of 12·9 per 1,000 of the estimated population and a proportion of 1,016 males to 1,000 females. The general death-rate was 1·8 per 1,000 above that recorded during the fourth Quarter of last year, and is the highest death-rate recorded in a fourth Quarter since the influenza epidemic in 1918.

Influenza was stated to be either a primary or contributory cause of deaths in 1,874 cases, or 1·5 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 84 per 1,000, this being 9 per 1,000 above the rate for the fourth Quarter of 1924, but 3 per 1,000 below the average of the 10 preceding fourth Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·09 in Grimsby; from *measles* 0·64 in Swindon, 0·93 in Oldham, 1·03 in Warrington, and 1·13 in Gloucester; from *scarlet fever* 0·16 in Blackpool, 0·17 in Bath and in Rotherham, and 0·28 in Barnsley; from *whooping cough* 0·38 in Middlesbrough, 0·39 in West Hartlepool, 0·44 in Gateshead, and 0·66 in Wigan; from *diphtheria* 0·28 in Bury and in Aberdare, 0·35 in Swindon, 0·46 in Edmonton, and 0·51 in Enfield; from *influenza* 0·45 in Gloucester, 0·51 in Doncaster, 0·52 in Oldham, and 0·74 in Barnsley.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 26·2 in Worcester, 27·2 in Oldham, 28·0 in Birkenhead, and 30·0 in Enfield.

Small Pox.

No fatal case of small-pox was registered during the quarter.

A supplementary table (VIII. *a*) showing the distribution of the cases of small-pox notified during the 13 weeks ended 2nd January, 1926, is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 40,142, as against 66,285, 63,643 and 62,292 in the fourth Quarters of 1922, 1923 and 1924.

NOTES ON MARRIAGES.—Third Quarter, 1925.

The number of *persons* married in the *third* Quarter of 1925 in England and Wales was 180,316 an increase of 16,758 over the number in the preceding Quarter, and 634 more than that in the corresponding Quarter of 1924. The number corresponds to an annual rate of 18·4 per 1,000 of the estimated mid-year population, and was equal to that recorded in the corresponding quarter of 1924.

UNITED KINGDOM AND IRISH FREE STATE.—
Second Quarter, 1925.

In Great Britain and Ireland 238,706 births and 145,819 deaths were registered in the three months ended 30th June, 1925. The natural increase in population was therefore 92,887. The number of persons married was 190,226.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

SUMMARY, 1925.

The Summary relating to the year 1925 giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 26–42 of this publication, the Tables being numbered IX–XVI.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 710,979 births and 473,006 deaths were registered in England and Wales in the year 1925. The natural increase of population, by excess of births over deaths, was, therefore, 237,973, the average annual increase in the preceding five years having been 349,045. The number of persons married during the year was 590,332.

The marriage rate in England and Wales during the year 1925 was 15·2 per 1,000 of the estimated population at the middle of the year, the birth-rate 18·3 per 1,000, and the death-rate 12·2 per 1,000. Infant mortality was 75 per 1,000 registered births. The birth-rate was the lowest recorded except during the war years 1917 and 1918; the death-rate and the infantile mortality rate were equal to the respective rates recorded in 1924.

A statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and in the groups of towns is given in Table X; and Table XI shows the provisional birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 105 Great Towns.

METEOROLOGY.***OCTOBER.**

Dry and sunny weather was experienced generally during the first half of the month, the weather of the second half of the month being unsettled, windy and wet. The warmest day of the month occurred generally during the first week, while the sunniest days were the 6th and 8th when sunshine records exceeding 10 hours were obtained at several stations. On the 8th, cold northerly or north-easterly winds set in and low temperatures with frequent ground frosts were experienced generally until the 17th when milder unsettled conditions became established. At all stations the mean temperature for the month was above normal. In the western, north-western and central districts there was an excess of rainfall for the month and a deficiency elsewhere, the heaviest daily fall at most stations occurring on the 19th. In the eastern districts and in the south-west of England sunshine was above normal. Fog occurred generally on most days during the first half of the month and was particularly thick on the morning of the 11th.

NOVEMBER.

The mild cyclonic conditions experienced towards the end of October were maintained during the first week of November; thereafter mainly fine, dry and cold weather prevailed, the last week being of a decidedly wintry character with much snow and high winds and gales but with considerable bright periods. A noteworthy feature of the month was the cold spell which lasted from the 8th to the 5th of December. During this period both day and night temperatures were low and ground frosts were of frequent occurrence, the total number of ground frosts for the month exceeding twenty at several stations. At Southport it was the coldest and sunniest November, with the exception of November 1915, during 55 and 35 years observations respectively. At Meltham (Yorks) the last three weeks of November were colder than any similar period in November for 48 years. Rainfall was deficient and sunshine was in excess in all districts; at Richmond (Surrey) the month was the sunniest November since 1883, at Worksop (Notts) it was the sunniest November for 45 years. Fog occurred frequently, dense fog occurring in London on the 14th and locally in the north of England from the 17th to the 23rd.

DECEMBER.

The cold spell which began on the 8th of November continued generally during the first week of December. At Garforth a minimum temperature in the screen of 9°F was recorded on the 6th while the minimum temperature on the grass fell to 7°F at Rhayader on the 3rd and 4th and to 6°F at Cranwell on the 6th. Snow, hail and sleet fell generally while fog occurred in many places, notably on the 4th, when it persisted throughout the day in London. A rapid rise in temperature at the end of the first week resulted in a thaw which caused extensive floods in north-east Yorkshire. The

* Furnished by the Director of the Meteorological Office.

milder weather, however, only lasted a few days and there was a return of wintry conditions, interrupted only about the 17th, which lasted until the 26th. Snow and sleet and ground frost occurred generally and in a few places the temperature did not rise above freezing point on the 13th, 14th and 15th. On the 26th the winds became westerly and a rapid rise in temperature took place, mild rainy weather prevailing until the end of the month with gales and high winds from the 29th to the 31st. The highest temperature of the month occurred in most places on the 29th. Monthly aggregates of precipitation above the normal were confined mainly to north-eastern and southern districts. Sunshine totals at most places were above normal, most of the sunshine being recorded during the first half of the month.

* Civilians only.

† The rates for 1925 are provisional.

Table III.—BIRTH-RATE, DEATH-RATE and ANALYSIS of MORTALITY during the last Five Quarters.

(Provisional figures. The rates for England and Wales for the year 1925 have been calculated on populations estimated to the middle of that year, while those for the towns have been calculated on populations estimated to the middle of 1924. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

	QUARTER.	ANNUAL BIRTH-RATE PER 1,000 TOTAL POPULATION.	ANNUAL DEATH-RATE PER 1,000 POPULATION.							DEATH-RATE PER 1,000 BIRTHS.		
			All Causes.	Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhea and Enteritis (under 2 Years).	Total deaths under one Year.

* Excluding non-civilians.

† The populations except that of Belfast which relates to civilians only are total populations and relate to 1925. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

* Excluding non-civilians.

† The rural district of Halesowen was created an urban district on 1st April, 1925. The enumerated population of the area in 1921 being above the limit of 20,000 the town is now included in this table.

‡ The deaths in Stafford for the third quarter of the year should read 49 instead of 68.

* Excluding non-civilians.

† The populations except that of Belfast are total populations and relate to 1925. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

* Deaths from Small-pox are included as follows:—Greater London, 1; Middlesbrough C.B., 1; Newcastle-on-Tyne C.B., 1.

* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1881-1915).
Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches). Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms. The factor used is 3. Winds above 43 miles per hour are reckoned as gales and winds between 21 and 43 miles per hour as moderate or strong winds. Direction is not tabulated when the speed of the wind is less than 5 miles per hour and winds of less than that velocity are counted as calm.

Table XIV—continued.

A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Table XV.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES, 1925.

Note.—The figures in this table are compiled from the weekly returns.

CITIES.	POPULATION (estimated).*	PRINCIPAL EPIDEMIC DISEASES.

* These populations relate as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The estimated population and deaths for London refer to the civilian population only.

‡ Including deaths from group in Paris, Amsterdam, Copenhagen, the German cities, and, Warsaw.

§ The deaths in this column relate to all ages for Bombay, Madras, and Oslo (Christiana), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg and the German cities.

|| Including 10 deaths from plague in Calcutta and 161 in Bombay, and 464 from Asiatic cholera in Calcutta, 11 in Bombay and 190 in Madras.

¶ The Registration of Births in Bombay is incomplete.
